
CS482: Acceleration Methods for MC Ray Tracing:

Sung-Eui Yoon
(윤성익)

<http://sglab.kaist.ac.kr/~sungeui/ICG>

KAIST

The KAIST logo consists of the word "KAIST" in a bold, blue, sans-serif font. Below the text is a light blue, horizontal oval shape that serves as a shadow or base for the letters.

Student Presentation Guidelines

- **Good summary, not full detail, of the paper**
 - **Talk about motivations of the work**
 - **Give a broad background on the related work**
 - **Explain main idea and results of the paper**
 - **Discuss strengths and weaknesses of the method**
- **Prepare an overview slide**
 - **Talk about most important things and connect them well**

High-Level Ideas

- **Deliver most important ideas and results**
 - Do not talk about minor details
 - Give enough background instead
- **Deeper understanding on a paper is required**
 - Go over at least two related papers and explain them in a few slides
- **Spend most time to figure out the most important things and prepare good slides for them**

Deliver Main Ideas of the Paper

- **Identify main ideas/contributions of the paper and deliver them**
- **If there are prior techniques that you need to understand, study those prior techniques and explain them**
 - **For example, A paper utilizes B's technique in its main idea. In this case, you need to explain B to explain A well.**

Be Honest

- **Do not skip important ideas that you don't know**
 - **Explain as much as you know and mention that you don't understand some parts**
- **If you get questions you don't know good answers, just say it**
 - **You need to explain them at KLMS board**

Result Presentation

- Give full experiment settings and present data with the related information
 - What does the x-axis mean in the below image?

- After showing the data, give a message that we can pull of the data
- Show images/videos, if there are

Utilizing Existing Resources

- **Use author's slides, codes, and video, if they exist**
- **Give proper credits or citations**
 - **Without them, you are cheating!**

Audience feedback form

Date:

Talk title:

Speaker:

1. Was the talk well organized and well prepared?

5: Excellent 4: good 3: okay 2: less than average 1: poor

2. Was the talk comprehensible? How well were important concepts covered?

5: Excellent 4: good 3: okay 2: less than average 1: poor

Any comments to the speaker

As an Evaluator

- **Evaluate in an objective manner**
- **Do not rank talks; just focus on each talk**

Prepare Quiz

- **Review most important concepts of your talk**
 - **Prepare two multiple-choices questions**
- **Example: What is the biased algorithm?**
 - **A: Given N samples, the expected mean of the estimator is I**
 - **B: Given N samples, the exp. Mean of the estimator is $I + e$**
 - **C: Given N samples, the exp. Mean of the estimator is $I + e$, where e goes to zero, as N goes to infinite**
- **Grade them in the scale of 0 to 10 and send it to TA**

Class Objectives

- **Discuss acceleration methods for GI**
 - **Importance sampling, bidirectional path tracing, and Metropolis**
- **Study biased techniques**
 - **Irradiance caching and photon mapping**
- **Last time:**
 - **Path tracing, a basic structure of Monte Carlo ray tracing including Russian roulette**

Algorithm so far: Path tracing

- Shoot primary rays through each pixel
- Shoot indirect rays, sampled over hemisphere
 - Path tracing shoots only 1 indirect ray
- Terminate recursion using Russian Roulette

Path Tracing

1 spp

(samples per pixel)

4 spp

16 spp

- **Pixel sampling + light source sampling folded into one method**

Importance Sampling

$$L(x \rightarrow \Theta) = L_e(x \rightarrow \Theta) + \int_{\Omega_x} f_r(\Psi \leftrightarrow \Theta) \cdot L(x \leftarrow \Psi) \cdot \cos(\Psi, n_x) \cdot d\omega_\Psi$$

Radiance from light sources + radiance from other surfaces

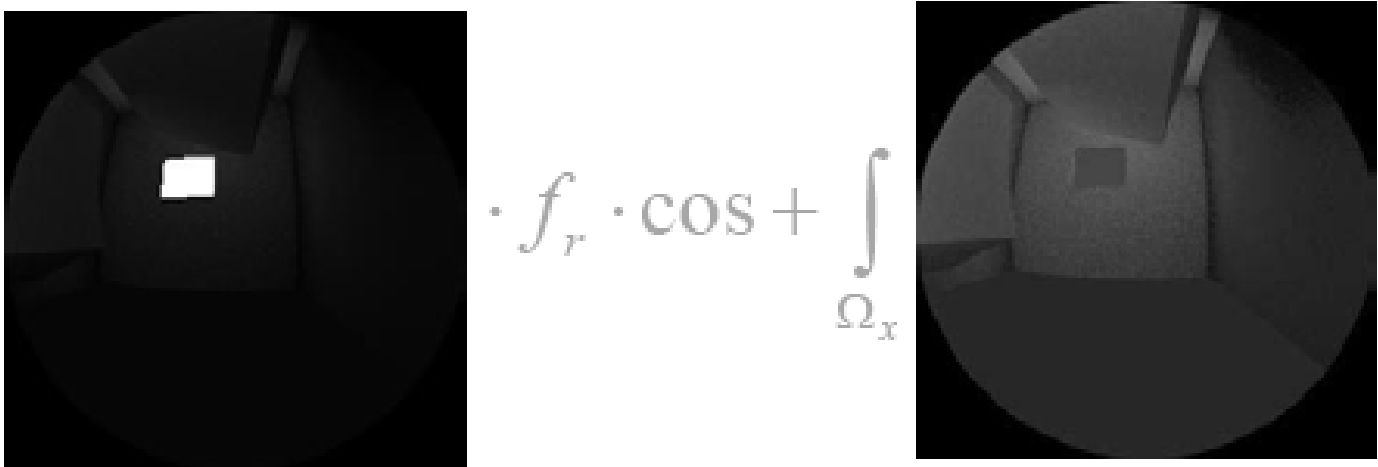

$$= L_e + \int_{\Omega_x} \cdot f_r \cdot \cos$$

Importance Sampling

$$L(x \rightarrow \ominus) = L_e + L_{direct} + L_{indirect}$$

$$= L_e + \int_{\Omega_x} \text{img}_1 \cdot f_r \cdot \cos + \int_{\Omega_x} \text{img}_2 \cdot f_r \cdot \cos$$

- So ... sample direct and indirect with separate MC integration

Comparison

From kavita's slides

- **With and without considering direct illumination**
 - **16 samples / pixel**

Rays per pixel

1 sample/
pixel

4 samples/
pixel

16 samples/
pixel

256 samples/
pixel

Direct Illumination

$$L(x \rightarrow \Theta) = \int_{A_{source}} f_r(x, -\Psi \leftrightarrow \Theta) \cdot L(y \rightarrow \Psi) \cdot G(x, y) \cdot dA_y$$

$$G(x, y) = \frac{\cos(n_x, \Theta) \cos(n_y, \Psi) \text{Vis}(x, y)}{r_{xy}^2}$$

hemisphere integration

area integration

Estimator for direct lighting

- Pick a point on the light's surface with pdf $p(y)$
- For N samples, direct light at point x is:

$$E(x) = \frac{1}{N} \sum_{i=1}^N \frac{f_r L_{source} \frac{\cos \theta_x \cos \theta_{\bar{y}_i}}{r_{x\bar{y}_i}^2} Vis(x, \bar{y}_i)}{p(\bar{y}_i)}$$

Generating direct paths

- Pick surface points y_i on light source
- Evaluate direct illumination integral

$$\langle L(x \rightarrow \Theta) \rangle = \frac{1}{N} \sum_{i=1}^N \frac{f_r(\dots)L(\dots)G(x, y_i)}{p(y_i)}$$

PDF for sampling light

- Uniform

$$p(y) = \frac{1}{Area_{source}}$$

- Pick a point uniformly over light's area
 - Can stratify samples

- Estimator:

$$E(x) = \frac{Area_{source}}{N} \sum_{i=1}^N f_r L_{source} \frac{\cos \theta_x \cos \theta_{\bar{y}_i}}{r_{x\bar{y}_i}^2} Vis(x, \bar{y}_i)$$

More points ...

1 shadow ray

9 shadow rays

$$E(x) = \frac{Area_{source}}{N} \sum_{i=1}^N f_r L_{source} \frac{\cos \theta_x \cos \theta_{\bar{y}_i}}{r_{x\bar{y}_i}^2} Vis(x, \bar{y}_i)$$

Even more points ...

36 shadow rays

100 shadow rays

$$E(x) = \frac{Area_{source}}{N} \sum_{i=1}^N f_r L_{source} \frac{\cos \theta_x \cos \theta_{\bar{y}_i}}{r_{x\bar{y}_i}^2} Vis(x, \bar{y}_i)$$

Bidirectional Path Tracing

- Or paths generated from both camera and source at the same time ...!

- Connect endpoints to compute final contribution

Metropolis

Metropolis

valid path

Metropolis

small
perturbations

Metropolis

Accept
mutations
based on
energy
transport

Biased Methods: Irradiance Caching

- **Indirect changes smoothly.**
- **Cache irradiance.**

Irradiance Caching

- **Indirect changes smoothly.**
- **Cache irradiance.**

Irradiance Caching

- **Indirect changes smoothly.**
- **Cache irradiance.**
- **Interpolate them.**

Biased Method: Photon Mapping

- **2 passes:**
 - **Shoot “photons” (light-rays) and record any hit-points**
 - **Shoot viewing rays and collect information from stored photons**

Pass 1: shoot photons

- Light path generated using MC techniques and Russian Roulette
- Store:
 - position
 - incoming direction
 - color
 - ...

Stored Photons

**Generate a few
hundreds of
thousands of
photons**

Pass 2: viewing ray

- Search for N closest photons (+check normal)
- Assume these photons hit the point we're interested in
- Compute average radiance

Result

**350K photons
for the caustic
map**

HENRIK WANN JENSEN 1996

Result

**350K photons
for the caustic
map**

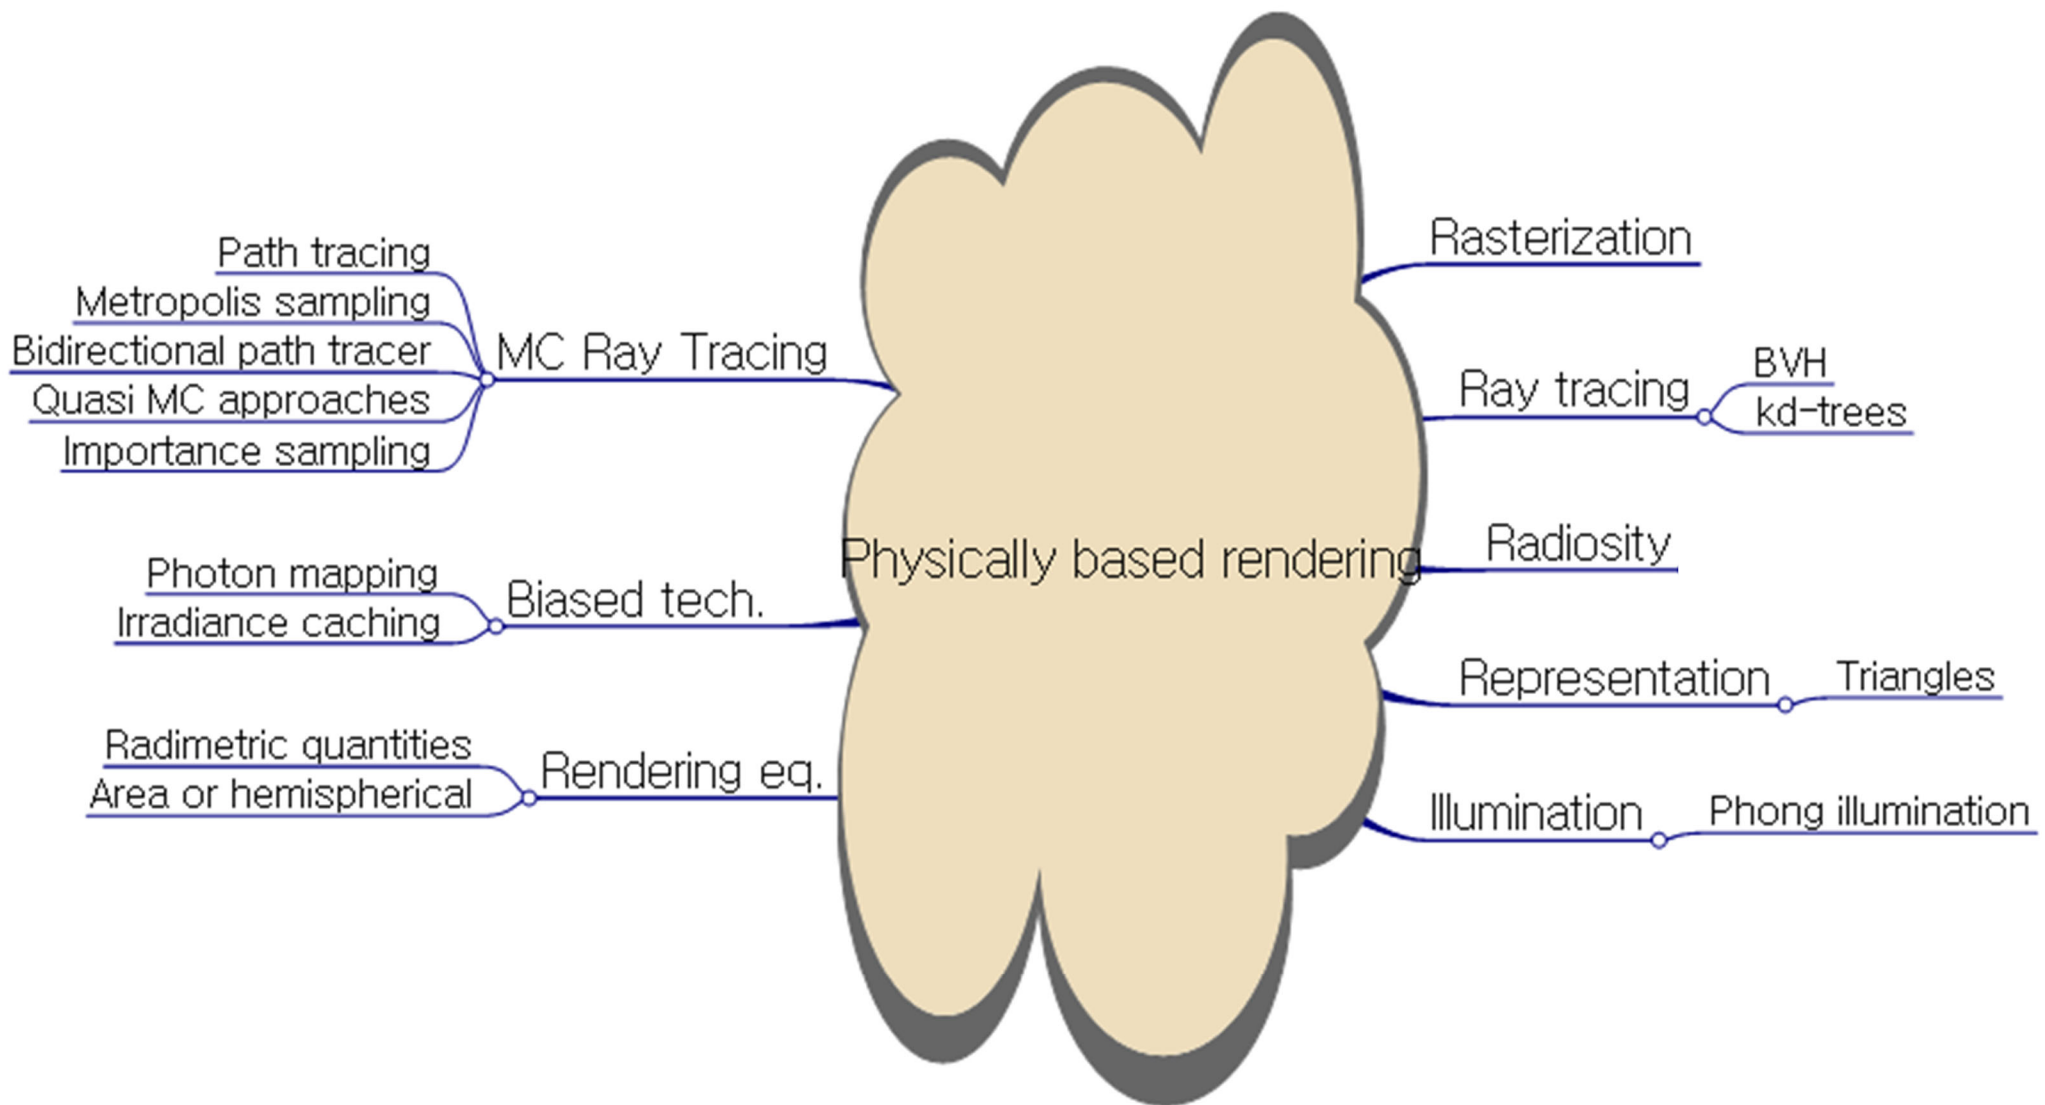

Class Objectives were:

- **Discuss acceleration methods for GI**
 - **Importance sampling, bidirectional path tracing, and metropolis**
- **Study biased techniques**
 - **Irradiance caching and photon mapping**

Summary

- **Two basic building blocks**
 - **Rasterization (undergraduate CG)**
 - **Ray tracing**
- **Radiometry**
- **Rendering equation**
- **MC integration**
- **MC ray tracing**
 - **Unbiased methods**
 - **Biased methods**

Summary

Next Time...

- **Recent techniques**

Homework

- **Go over the next lecture slides before the class**
- **Watch 2 SIG/CVPR/ISMAR videos and submit your summaries every Mon. class**
 - **Just one paragraph for each summary**
 - **Any top-tier conf (e.g., ICRA) is okay**

Example:

Title: XXX XXXX XXXX

Abstract: this video is about accelerating the performance of ray tracing. To achieve its goal, they design a new technique for reordering rays, since by doing so, they can improve the ray coherence and thus improve the overall performance.
